

Dream11 Player Card Picker

Build Document — Antigravity Handoff

Feature F04 + F05 · IPL Winner Prediction App

Feature	F04 — Player Card Picker + F05 — Cards Fly Left Animation
Module	Dream11 Team Predictor
Project	IPL Winner Prediction App
Author	Pavan Bhargav MN
Prepared for	Antigravity — full build handoff
Phase	Phase 4 (see Feature_Log.md)
Estimate	8 hours total (5 hrs card picker + 3 hrs animation)

Contents

Feature summary

A Dream11 player selection screen where players are displayed as premium trading cards — dramatic dark background, large jersey number behind the player, gold accents, physical card aesthetic. Think Kobe Bryant Black Mamba card style. Users search for a player, the card appears, they select up to 11 to build their Dream11 team.

Two features in this document

F04 — Player Card Picker. The card grid, search, filter pills, selection logic, captain and vice-captain assignment, and the selection tray at the bottom.

F05 — Cards Fly Left Animation. The signature moment when the user hits Predict — all 11 selected cards animate off to the left with staggered delay, then the result panel reveals from the right.

What each card looks like

Card dimensions: 160px wide by 220px tall. Every card must feel like a physical collectible trading card — premium, dramatic, dark.

Layer	What it is	Style
Jersey number	Huge semi-transparent number in background	Oswald font, 120px, 8% opacity, gold colour, centred behind everything
Card background	Dark gradient using team colour	Linear gradient from top to bottom — dark team colour. Full list in Section 03.
Grain texture	Subtle diagonal noise overlay	CSS: repeating-linear-gradient at 45deg, 1px stripes, 3% opacity white. Gives physical card feel.
Gold foil border	Card outer border	1px solid gold (#c9a84c). On hover: box-shadow 0 0 18px rgba(201,168,76,0.5)
Player name	Top of card, small caps	Syne Bold 11px, letter-spacing 0.15em, gold colour #c9a84c
Player avatar	Centre of card	Circular avatar or silhouette, 72px diameter, team colour ring border
Team badge	Small team code below avatar	JetBrains Mono 10px, muted gold
Role badge	Bottom section — BAT / BOWL / AR / WK	Pill badge, 9px Syne Bold, dark background with team colour text
Form dots	5 dots below role badge	8px circles: green (#22c55e) = good, amber (#f4a623) = average, red (#ef4444) = poor
Credits	Bottom right corner	JetBrains Mono 9px, muted, shows player credit value e.g. 10.5

Dark gradient per team

Each team gets its own card background. These are dark versions of the team's identity colour — not bright. The card must feel like looking into the team's world.

Team	Full name	Gradient from	Gradient to
CSK	Chennai Super Kings	#1A1400	#352B00
MI	Mumbai Indians	#001428	#002A56
RCB	Royal Challengers Bengaluru	#1A0000	#3D0000
KKR	Kolkata Knight Riders	#150020	#350050
GT	Gujarat Titans	#000D1A	#001E3C
SRH	Sunrisers Hyderabad	#1A0900	#3D1800
RR	Rajasthan Royals	#1A0010	#3D0028
LSG	Lucknow Super Giants	#00121A	#00303D
DC	Delhi Capitals	#000D1A	#001E3C
PBKS	Punjab Kings	#1A0000	#3D0000

CSS pattern: background: linear-gradient(160deg, [from], [to]); applied to the card element.

How the card behaves

Default state

Gold foil border (1px #c9a84c). No glow. Slight scale at 1.0.

Hover state

- Card lifts: transform translateY(-6px) scale(1.03)
- Gold glow: box-shadow 0 0 20px rgba(201, 168, 76, 0.45)
- Slight 3D tilt toward cursor using VanillaTilt.js — max tilt 10 degrees, perspective 800px
- Transition: all 0.2s ease
- Cursor: pointer

Selected state — card flip

When the user clicks a card it performs a CSS 3D flip (rotateY 180 degrees). The front face (player info) hides. The back face reveals a checkmark and SELECTED text.

Back face content:

- Large checkmark icon in the centre — gold colour
- SELECTED text below — Syne Bold 12px, gold
- Card background stays the same team gradient
- Gold border gets brighter: #e8c96a

Second click on selected card — popover

Clicking a selected card opens a small popover above the card with three options:

- Set as Captain — shows C badge in gold on the card back
- Set as Vice Captain — shows VC badge in silver on the card back
- Remove — deselects the card, flips it back to front face

Only one Captain and one Vice Captain allowed at a time. Setting a new C/VC removes the badge from the previous holder.

Finding players

The search bar sits fixed at the top of the screen below the top navigation bar. It is always visible as the user scrolls through cards.

Visual design

- Full width input, dark background (#0f1117), 1px border (#1e2130)
- Search icon on the left inside the input — muted colour
- On focus: border changes to amber (#f4a623), subtle amber glow
- Placeholder text: Search players, teams or roles...
- Clear X button appears on the right when input has text

Search behaviour

- Filters in real time as user types — no button press
- Searches across: player name, team code, and role
- Examples: typing 'Kohli' shows Virat Kohli's card
- Typing 'BOWL' shows all bowlers across all teams
- Typing 'CSK' shows all CSK players
- Typing 'WK' shows all wicketkeepers
- Case insensitive — 'kohli', 'KOHLI', 'Kohli' all work

Empty state

If no results match: show a centred message — player icon, 'No player found', and a suggestion to try a different name or team code. Subtle, not jarring.

Filter pills — below the search bar

A row of filter pills: All | BAT | BOWL | AR | WK

- Works alongside search — can search 'CSK' and filter 'BOWL' simultaneously
- Active pill: filled amber background, black text
- Inactive pill: transparent, amber border, amber text

Rules for building the team

Rule	Detail
Max selection	Exactly 11 players must be selected to enable Predict
Captain	Exactly one Captain (C) required — earns 2x points in Dream11
Vice Captain	Exactly one Vice Captain (VC) required — earns 1.5x points
Deselect	Click selected card — popover appears with Remove option
Team limit	Maximum 7 players from a single team (Dream11 rule)
Role balance	Suggested: 1 WK, 3-4 BAT, 2-3 AR, 3-4 BOWL (not enforced, shown as tip)
Over-selection	If user tries to select 12th player: card shakes, counter turns red, toast shows '11 players max'

Counter display

Top right of the screen. Large monospace number showing current selection count out of 11. Format: 7 / 11. Colour: amber when under 11, green when exactly 11. Animates with a small scale bounce on each selection.

Selection tray — bottom of screen

A fixed tray at the bottom showing mini-avatars of selected players in a horizontal row. Each avatar is 32px circle with team colour ring. C and VC players have a gold/silver overlay badge. Tapping an avatar in the tray opens the popover for that player.

This is the most important UX moment in the entire app

When the user hits Predict, all 11 player cards must animate flying off to the left with a staggered delay — like a sports broadcast transition. Clean, fast, and confident. After the last card exits, the result panel slides in from the right. This single animation defines the feel of the entire product.

Step by step sequence

1. User hits Predict button (only active when exactly 11 are selected).
2. All 11 selected cards receive the CSS class card-exit simultaneously.
3. Each card has a CSS variable --index set from 0 to 10 in order of selection.
4. Cards exit one by one: card 0 at 0ms delay, card 1 at 50ms, card 2 at 100ms, and so on.
5. Each card translates -120% on X and fades to opacity 0 over 450ms.
6. Last card finishes at 550ms (10 x 50ms + 450ms animation duration).
7. After 600ms total: result panel slides in from translateX(100%) to translateX(0).
8. Result panel shows win probability with count-up animation.

Predict button states

State	Appearance
Under 11 selected	Dimmed — opacity 0.35, pointer-events none, greyed text
Exactly 11 selected	Active — pulses amber glow once, opacity 1.0, cursor pointer
Clicked / loading	Spinner inside button, text changes to Predicting...

Schema for each player object

```
// src/data/players.js
export const PLAYERS = [
  {
    id: "VK18",
    name: "Virat Kohli",
    team: "RCB",
    role: "BAT", // BAT | BOWL | AR | WK
    jersey: 18,
    country: "India",
    batting_style: "Right-hand bat",
    bowling_style: "Right-arm medium",
    form: ["good", "good", "avg", "good", "poor"], // last 5 matches
    credits: 10.5,
  },
  // ... more players
]
```

Role values

Value	Meaning	Badge colour
BAT	Batter	Blue tint
BOWL	Bowler	Red tint
AR	All-rounder	Purple tint
WK	Wicketkeeper	Gold tint

Form values

Value	Dot colour	Meaning
good	Green #22c55e	Good performance in that match
avg	Amber #f4a623	Average performance
poor	Red #ef4444	Poor performance

Full screen structure

```

+-----+
| TOP BAR |
| Title | 7 / 11 | [Predict] |
+-----+
| SEARCH BAR |
| [ search icon ] Search players, teams... [X] |
+-----+
| FILTER PILLS |
| [All] [BAT] [BOWL] [AR] [WK] |
+-----+
| |
| CARD GRID – scrollable |
| 3 columns desktop / 2 tablet / 1 mobile |
| |
| [Card] [Card] [Card] |
| [Card] [Card] [Card] |
| [Card] [Card] [Card] |
| |
+-----+
| SELECTION TRAY (fixed bottom) |
| [avatar][avatar][avatar]...[C][VC] 11/11 |
+-----+

```

Responsive grid

Breakpoint	Columns	Card width
Desktop (> 1024px)	3 columns	160px fixed
Tablet (768–1024px)	2 columns	auto
Mobile (< 768px)	2 columns (smaller cards)	auto, padding reduced

All new files for this feature

File path	Purpose
src/pages/Dream11.jsx	Main page component — layout, state management, predict trigger
src/components/PlayerCard.jsx	Individual trading card — front face, back face, flip logic
src/components/PlayerCard.module.css	All card styles — gradient backgrounds, flip animation, hover glow, grain texture
src/components/SearchBar.jsx	Search input with icon, clear button, filter pills
src/components/SelectionTray.jsx	Fixed bottom tray showing selected player mini-avatars
src/components/CaptainPopover.jsx	Popover on second click — Set as C / Set as VC / Remove
src/components/ResultPanel.jsx	Slides in from right after predict — win probability and strategy
src/data/players.js	Full player data array with all IPL squads
src/hooks/usePlayerSearch.js	Search and filter logic — takes query + role filter, returns filtered array
src/hooks/useTeamSelection.js	Selection state — selected players, captain, VC, validation logic

Libraries needed for this feature

Library	Version	Purpose	Install
React	18+	Component framework	Already installed
Framer Motion	11+	Result panel slide-in animation	Already installed
VanillaTilt.js	1.8+	3D tilt on card hover	npm install vanilla-tilt
Syne	—	Display font — player name, UI text	Google Fonts (already loaded)
JetBrains Mono	—	Numbers — credits, counter	Google Fonts (already loaded)
Oswald	—	Jersey number background on card	Add to Google Fonts import

Key implementations

Card flip — 3D rotateY

```
.card-wrapper { perspective: 800px; width: 160px; height: 220px; }
.card-inner {
  position: relative; width: 100%; height: 100%;
  transform-style: preserve-3d;
  transition: transform 0.5s cubic-bezier(0.4, 0, 0.2, 1);
}
.card-wrapper.selected .card-inner { transform: rotateY(180deg); }
.card-front, .card-back {
  position: absolute; width: 100%; height: 100%;
  backface-visibility: hidden; border-radius: 12px;
}
.card-back { transform: rotateY(180deg); }
```

Grain texture overlay

```
.card-front::after {
  content: '';
  position: absolute; inset: 0; border-radius: 12px;
  background: repeating-linear-gradient(
    45deg,
    rgba(255,255,255,0.03) 0px,
    rgba(255,255,255,0.03) 1px,
    transparent 1px,
    transparent 4px
  );
  pointer-events: none;
}
```

Card exit animation — fly left on predict

```
.card-exit {
  animation: flyLeft 0.45s cubic-bezier(0.4, 0, 0.2, 1) forwards;
  animation-delay: calc(var(--index) * 50ms);
}
@keyframes flyLeft {
  to { transform: translateX(-120%); opacity: 0; }
}
/* Set --index on each card in JS before adding .card-exit class */
/* card.style.setProperty('--index', i) */
```

Jersey number background

```
.jersey-num {
  font-family: 'Oswald', sans-serif;
  font-size: 120px;
  font-weight: 700;
  color: #c9a84c;
  opacity: 0.08;
  position: absolute;
  bottom: -10px;
  right: -10px;
  line-height: 1;
  user-select: none;
  pointer-events: none;
  z-index: 0;
}
```

Read these before writing any code

File	What to read
Project_Context.md	Overall project background, data, model, design philosophy
Architecture.md	Full component tree, state management rules, all API endpoints
Coding_Rules.md	Naming conventions, component structure, CSS variable system, animation patterns
Feature_Log.md	Mark F04 and F05 as in-progress when you start. Update to done when complete.

CSS variables to use from globals.css

```
/* Already defined – do not hardcode these values */
--color-amber: #f4a623; /* primary accent */
--color-gold: #c9a84c; /* card borders, jersey number */
--color-gold2: #e8c96a; /* hover glow, selected state */
--color-bg: #0a0c10; /* page background */
--color-surface: #0f1117; /* card surface base */
--color-border: #1e2130; /* default borders */
--color-text: #e8e6df; /* primary text */
--color-muted: #6b7280; /* secondary text */
--font-display: 'Syne', sans-serif;
--font-mono: 'JetBrains Mono', monospace;
--font-jersey: 'Oswald', sans-serif; /* add this for jersey number */
```
